## Summary

Final-year B.Tech student at IIT Palakkad (Civil Engineering, Minor in Data Science), graduating July 2027. Founding member and CTO of Snappito, a home services startup in Patna with 100+ regular customers; own all of its tech and help plan its growth. Also building IIT Palakkad's guest house booking portal, working directly with the institute's administration as the client.

## Education

**Indian Institute of Technology (IIT) Palakkad** — Palakkad, Kerala
*Bachelor of Technology (B.Tech), Civil Engineering with Minor in Data Science; CGPA: 8.54* — *Aug 2023 – Jul 2027*

**Guru Tegh Bahadur Public School** — New Delhi
*CBSE Class XII; 95.8%* — *2022*

## Experience

**Snappito** — Jan 2026 – Present
*Founding Member and CTO* — *Remote*

- On-demand home services (deep cleaning, laundry, daily house help) for households in **Patna**. One of a **3-person founding team**, from the idea through incorporation (Apr 2026) and launch.
- Own all technology as the only technical member: built the website and currently building the mobile app for booking services.
- Plan business development and growth strategy with one co-founder, while the third runs on-ground operations.
- Grown to **100+ regular, repeat customers** since launch.

**IIT Palakkad – Guest House Booking Portal** — Aug 2026 – Present
*Administrative Intern* — *Palakkad, Kerala (Hybrid)*

- Building the booking and approval portal and public website for the institute's guest houses with one other student, from the Administration Section's requirements to a working product (**Next.js, TypeScript, Supabase, PostgreSQL**).
- Work directly with the Administration Section as the client: take their requirement and correction lists, turn each item into a feature or fix, and bring it back for review.
- Moved the institute's existing approval chain into the product, so each booking request goes through a **multi-stage approval workflow** where every approver sees only their step; staff allocate rooms on a visual grid, with PDF invoices and email notifications built in.
- Made double bookings impossible at the database layer (PostgreSQL exclusion constraint), so staff never have to sort out two guests given the same room, even when requests arrive at the same time.
- Build with **AI coding tools (Claude Code)** and check every change against **338 unit tests and 28 end-to-end tests** before it goes in.

**Accenture** Certificate — May 2026 – Jul 2026
*Advanced Application Engineering Intern* — *Gurugram, India*

- Configured and provisioned client tenants on **Okta Customer Identity Cloud** for enterprise identity and access management.
- Wrote **LLM-based scripts** to automate tenant configuration, cutting repetitive manual setup.

## Leadership

**Inter IIT Tech Meet 14.0** — Sep 2025 – Jan 2026
*Contingent Leader, IIT Palakkad*

- Led IIT Palakkad's contingent across multiple problem statements to **1 Gold, 1 Bronze** and several top ranks.
- Set up the process to allocate problem statements across teams, track progress and manage mid-prep submissions; every submission went in on time.

**Petrichor'26, IIT Palakkad's techno-cultural fest** — Apr 2025 – Feb 2026
*Technical Head*

- Led a **30+ member team** to plan and run **12+ technical events** with **200+ registrations**.

## Projects

**AutoJudge – Online Judge for Programming Labs** | *FastAPI, Next.js, Supabase, Docker, Kubernetes* — GitHub

- Built for two users with different needs: students write and test Python or C++ in the browser and submit; professors create labs, upload test cases and track each student's progress.
- Runs every submission in its own short-lived, resource-limited container, so one bad submission can't slow down or break anyone else's.
- Documented the architecture, REST API and database schema in the README.

**Financial Sentiment Forecasting (AI/ML research)** | *Python, PyTorch, Hugging Face, XGBoost, LightGBM* — GitHub

- Research project with one teammate: does company-level news sentiment help forecast Indian stock returns 1, 2 and 5 days ahead?
- Built a **25K+ entity-level financial news dataset** and a DeBERTa-v3 sentiment model with **92.5% accuracy**, whose outputs feed the forecasting models.
- Tested forecasters on strict chronological splits (train to 2023, validate 2024, test 2025) so results reflect what would have worked in real time.

## Skills

**Programming:** Python, TypeScript, JavaScript, Java, C++, SQL
**Product building:** React, Next.js, FastAPI, PostgreSQL, Supabase, Docker, Kubernetes, REST APIs
**Data and AI/ML:** PyTorch, Hugging Face Transformers, scikit-learn, XGBoost, LLM-based automation
**Other:** 350+ problems solved on LeetCode and Codeforces
